

Banking Daily Quiz Blog - February 18

1. Study the following information carefully and answer the question given below.

Seven persons D, G, P, L, J, U and Q are sitting in a row facing to the north. They all have of different ages. D sits 3rd from one of the extreme ends of the row. Q sits 2nd to the right of D. The number of persons sit to the left of Q is same as the number of persons sit to the right of G, who is 20 years old. P sits 4th to the left of the one who is 35 years old. Q is not 35 years old. Total age of immediate neighbours of D is 75 years. J is 30 years old. P is 20 year older than one of his immediate neighbours. U sits to the right of L, who sits immediate to the left of the one who is 25 years old. Q is 5 year younger than P.

A. What is the position of J with respect to Q?

A 2nd to the left

B Immediate left

C Immediate right

D 4th to the left

E 3rd to the right

Solution

Seven persons D, G, P, L, J, U and Q are sitting in a row facing to the north having different ages.

D sits 3rd from one of the extreme ends of the row. Q sits 2nd to the right of D.

ENTRI

Case (i)

Case (ii)

The number of persons sit to the left of Q is same as the number of persons sit to the right of G, who is 20 years old. So there is no possibility for placing G in case (i). So, case (i) is eliminated.

Case (i)

P sits 4th to the left of the one who is 35 years old. Q is not 35 years old.

Total age of immediate neighbours of D is 75 years.

J is 30 years old. So, J will be immediate right of P.

U sits to the right of L, who sits immediate to the left of the one who is 25 years old. So, the person who is immediate right of L is 25 years old.

P is 20 year older than one of his immediate neighbours. There is no chance that P is having 40 years age as already L is having 40 years age. P's age is 20 years more than the age of his immediate right J (30 years). So the age of P will be 50 years.

Q is 5 year younger than P. So, the final arrangement as shown below,

J is Fourth to the left of Q.

Therefore answer option is (D).

B. Four of the following five are alike in a certain way and so form a group. Find the one who does not belong to that group?

A P

B G

C J

D L

E U

Solution

Seven persons D, G, P, L, J, U and Q are sitting in a row facing to the north having different ages.

D sits 3rd from one of the extreme ends of the row. Q sits 2nd to the right

of D.

The number of persons sit to the left of Q is same as the number of persons sit to the right of G, who is 20 years old. So there is no possibility for placing G in case (i). So, case (i) is eliminated.

P sits 4th to the left of the one who is 35 years old. Q is not 35 years old.

20 35 35

Total age of immediate neighbours of D is 75 years.

J is 30 years old. So, J will be immediate right of P.

U sits to the right of L, who sits immediate to the left of the one who is 25 years old. So, the person who is immediate right of L is 25 years old.

P is 20 year older than one of his immediate neighbours. There is no chance that P is having 40 years age as already L is having 40 years age. P's age is 20 years more than the age of his immediate right J (30

years) .So the age of P will be 50 years.

Q is 5 year younger than P. So, the final arrangement as shown below,

Except U remaining are immediate in consecutive positions. So, U is not belong to that group.

Therefore answer option is (E).

C. Who among the following is 40 years old?

A L

B P

C D

D U

E None of these

Solution

Seven persons D, G, P, L, J, U and Q are sitting in a row facing to the north having different ages.

D sits 3rd from one of the extreme ends of the row. Q sits 2nd to the right of D.

The number of persons sit to the left of Q is same as the number of persons sit to the right of G, who is 20 years old. So there is no possibility for placing G in case (i). So, case (i) is eliminated.

P sits 4th to the left of the one who is 35 years old. Q is not 35 years old.

Total age of immediate neighbours of D is 75 years.

J is 30 years old. So, J will be immediate right of P.

U sits to the right of L, who sits immediate to the left of the one who is 25 years old. So, the person who is immediate right of L is 25 years old.

P is 20 year older than one of his immediate neighbours. There is no chance that P is having 40 years age as already L is having 40 years age. P's age is 20 years more than the age of his immediate right J (30 years). So the age of P will be 50 years.

Q is 5 year younger than P. So, the final arrangement as shown below,

L is having 40 years age.

Therefore answer option is (A).

D. Which of the following statement is true?

A J sits to the right of L

B D sits 3rd to the right of G

C P sits at one of the extreme ends

D None is true

E Q sits immediate right of the one who is 35 years old

Solution

Seven persons D, G, P, L, J, U and Q are sitting in a row facing to the north having different ages.

D sits 3rd from one of the extreme ends of the row. Q sits 2nd to the right of D.

The number of persons sit to the left of Q is same as the number of persons sit to the right of G, who is 20 years old. So there is no possibility for placing G in case (i). So, case (i) is eliminated.

P sits 4th to the left of the one who is 35 years old. Q is not 35 years old.

Total age of immediate neighbours of D is 75 years.

J is 30 years old. So, J will be immediate right of P.

U sits to the right of L, who sits immediate to the left of the one who is 25 years old. So, the person who is immediate right of L is 25 years old.

P is 20 year older than one of his immediate neighbours. There is no chance that P is having 40 years age as already L is having 40 years age. P's age is 20 years more than the age of his immediate right J (30

years) .So the age of P will be 50 years.

Q is 5 year younger than P. So, the final arrangement as shown below,

Q sits immediate right of U who is having 35 years age. So, this is true according to the arrangement.

Therefore answer option is (E).

- E. The number of persons sit between L and Q is same as the number of persons sit between P and ___?

A D

B G

C U

D Q

E None of these

Solution

Seven persons D, G, P, L, J, U and Q are sitting in a row facing to the north having different ages.

D sits 3rd from one of the extreme ends of the row. Q sits 2nd to the right of D.

The number of persons sit to the left of Q is same as the number of persons sit to the right of G, who is 20 years old. So there is no possibility for placing G in case (i). So, case (i) is eliminated.

P sits 4th to the left of the one who is 35 years old. Q is not 35 years old.

Total age of immediate neighbours of D is 75 years.

J is 30 years old. So, J will be immediate right of P.

U sits to the right of L, who sits immediate to the left of the one who is 25 years old. So, the person who is immediate right of L is 25 years old.

P is 20 year older than one of his immediate neighbours. There is no chance that P is having 40 years age as already L is having 40 years age. P's age is 20 years more than the age of his immediate right J (30 years). So the age of P will be 50 years.

Q is 5 year younger than P. So, the final arrangement as shown below,

The number of persons sit between L and Q is 2.

The number of persons sit between P and D is also 2.

Therefore answer option is (A).

2. Study the following information carefully and answer the question given below.

A certain number of persons sit in a row facing to the north direction. L sits 3rd to the left of M. Five persons sit between M and N. J sits immediate to the right of M. Three persons sit between Q and J. Q does not sit next to N. N is 7th from one of the ends. The number of persons sit to the right of Q is four more than the persons who sit to the left of N. K sits 2nd from one of the ends and sit to the right of M.

A. How many persons sit in the above arrangement?

A 25

B 26

C 28

D 24

E None of these

Solution

ENTRI

A certain number of persons sit in a row facing to the north direction. L sits 3rd to the left of M. Five persons sit between M and N. J sits immediate to the right of M. So, we will get 2 possibility cases as shown below,

Three persons sit between Q and J.

Q does not sit next to N and N is 7th from one of the ends. So, case (i) is eliminated.

The number of persons sit to the right of Q is four more than the persons

who sit to the left of N. So, there will be 10 persons to the right of Q as there are 6 persons to the left of N.

K sits 2nd from one of the ends and sits to the right of M. The final arrangement as shown below,

There are **28 persons** in the row.

Therefore answer option is (C).

B. What is the position of L with respect to Q?

A 8th to the right

B 8th to the left

C 6th to the right

D 5th to the left

E None of these

Solution

A certain number of persons sit in a row facing to the north direction. L sits 3rd to the left of M. Five persons sit between M and N. J sits

immediate to the right of M. So, we will get 2 possibility cases as shown below,

Three persons sit between Q and J.

Q does not sit next to N and N is 7th from one of the ends. So, case (i) is eliminated.

The number of persons sit to the right of Q is four more than the persons

who sit to the left of N. So, there will be 10 persons to the right of Q as there are 6 persons to the left of N.

K sits 2nd from one of the ends and sit to the right of M. The final arrangement as shown below,

L is 8th to the left of Q.

Therefore answer option is (B).

C. How many persons sit to the right of the one, who sits immediate left of J?

A Ten

B Seven

C None of these

D Eight

E Eleven

Solution

A certain number of persons sit in a row facing to the north direction. L sits 3rd to the left of M. Five persons sit between M and N. J sits immediate to the right of M. So, we will get 2 possibility cases as shown below,

Three persons sit between Q and J.

Q does not sit next to N and N is 7th from one of the ends. So, case (i) is eliminated.

The number of persons sit to the right of Q is four more than the persons

who sit to the left of N. So, there will be 10 persons to the right of Q as there are 6 persons to the left of N.

K sits 2nd from one of the ends and sit to the right of M. The final arrangement as shown below,

There are 15 persons to the right of the one who is immediate left of J. As there is no option having 15. So **None of these** is correct option.

Therefore answer option is (C).

D. How many persons sit between L and J?

A Five

B None of these

C Seven

D Four

E Three

Solution

A certain number of persons sit in a row facing to the north direction. L sits 3rd to the left of M. Five persons sit between M and N. J sits immediate to the right of M. So, we will get 2 possibility cases as shown below,

Three persons sit between Q and J.

Q does not sit next to N and N is 7th from one of the ends. So, case (i) is eliminated.

The number of persons sit to the right of Q is four more than the persons

who sit to the left of N. So, there will be 10 persons to the right of Q as there are 6 persons to the left of N.

K sits 2nd from one of the ends and sit to the right of M. The final arrangement as shown below,

There are **Three** persons sit between L and J.

Therefore answer option is (E).

E. If two persons sit between X and N, then what is the position of X with respect to L?

A 4th to the left

B 6th to the left

C 5th to the right

D 3rd to the left

E 7th to the left

Solution

ENTRI

A certain number of persons sit in a row facing to the north direction. L sits 3rd to the left of M. Five persons sit between M and N. J sits immediate to the right of M. So, we will get 2 possibility cases as shown below,

Three persons sit between Q and J.

Q does not sit next to N and N is 7th from one of the ends. So, case (i) is eliminated.

The number of persons sit to the right of Q is four more than the persons

who sit to the left of N. So, there will be 10 persons to the right of Q as there are 6 persons to the left of N.

K sits 2nd from one of the ends and sit to the right of M. The final arrangement as shown below,

If two persons are between N and X then X will be 6th to the left of L.

Therefore answer option is (B).
